

Welcome to Winter of Code Social

YOUR FIRST STEP INTO OPEN SOURCE

Arushi Malhotra

AGENDA

- Build real projects
- Work with a team
- Learn how developers collaborate
- Experience open-source for the first time

This program is designed to help you learn by DOING. You will collaborate, code, and build something that actually matters.

WHAT IS OPEN SOURCE?

- Open source = projects where anyone can read, use, and improve the code
- Millions of developers build things together
- Most real-life tech (AI, web, games) uses open source
- “Open source means learning in the real world, not just in a classroom.”

WHAT YOU'LL BE DOING IN WOCS

You will:

- Join a team
- Pick Issues (tasks)
- Write code or content
- Submit your work using GitHub
- Build two complete projects
- “Your team will have weekly tasks and Issues. GitHub will keep everything organized.”

WHY GITHUB MATTERS

GitHub helps you:

- Work together without breaking each other's code
- Track progress
- See who completed what
- Learn teamwork & real developer workflows
- Build a portfolio for college & internships

THE ONLY 3 TABS YOU NEED

1. Code Tab — Where all project files are
2. Issues Tab — Your task board
3. Pull Requests (PR) Tab — Where you submit your work

THE CODE TAB

- Explore the folder structure
- Read instructions (README.md)
- Understand where your changes go
- Download / view code
- “Think of this like your project’s main folder.”

THE ISSUES TAB

- Issues = Tasks
- Every Issue explains one piece of work
- Assigned to team members
- Includes requirements and guidance
- You can ask questions inside the issue.

HOW TO USE ISSUES

1. Pick an Issue
2. Assign yourself
3. Read instructions
4. Comment if confused
5. Start working
 - “One Issue = One Task = One Pull Request.”

WHAT IS A PULL REQUEST? (PR)

- Pull Request = safe way to add your code
- Place for team members to review
- Final step before your work becomes part of the project

THE BEGINNER GITHUB WORKFLOW

The only flow you need:

1. Choose an Issue
2. Do the work
3. Upload your change
4. Open a Pull Request
5. Get a review.
6. Merge

HOW TO WRITE A GOOD PR

Include:

- What Issue you solved
- What you changed
- Screenshots if needed
- Ask reviewers to check your work

HOW TO BE A GREAT TEAMMATE

- Be active in Issues
- Communicate early
- Keep changes small
- Ask questions
- Help each other
- Respect reviews

YOUR NEXT STEPS

- Create a GitHub account
- Open your project repo
- Explore Issues
- Meet your team
- Start small & get comfortable

Thank you!
