

Project Admin Guide (Winter of Code Social)

Introduction

Welcome to **Winter of Code Social (WOCS)**!

As a **Project Admin**, you're helping contributors build, learn, and grow while ensuring your project is set up correctly for tracking and visibility on the leaderboard.

This guide covers everything you need to:

- ✓ Set up your repository
- ✓ Add the webhook to enable tracking
- ✓ Follow proper GitHub practices
- ✓ Manage issue labels and PR levels
- ✓ Stay aligned with the event schedule

Kick-Off Meeting 🎉

We're starting this season with a **Kick-Off Meeting on Saturday**, which is **mandatory for all project admins**. The meeting will be at 8 pm IST and 09:30 am CST on November 1. Please convert the time in your timezone to ensure you're a part of it. The link to join is in the newsletter.

If you're unable to attend live, that's okay, a recording will be shared afterward.

The kickoff will include:

- Full walkthrough of how Winter of Code Social will work
- Points system and leaderboard demo
- Project setup guidance
- Q&A session for contributors, admins and mentors

Stay Connected

All communication and updates will happen in our Discord Server, so make sure you've joined and introduced yourself in the [#introduction](#) channel.

Setting Up Your Repository

You also have to add mentors as admin to have access to your repo. So they can guide the contributors better.

1. Create a Strong README

Your **README.md** should clearly explain:

- What the project does and why it matters
- How to install and run it locally
- Where contributors can start (issues, docs, etc.)

2. Add a **CONTRIBUTING.md**

This helps new contributors get started smoothly. Include:

- Contribution process and code style
- Steps to create issues and PRs
- Any dependencies or setup instructions

3. Organize Issues

- Add detailed descriptions and difficulty levels.
- Use consistent labels (**level 1**, **level 2**, **level 3**) to make it easy for beginners to pick tasks.
- Close or reassign stale issues to keep your repo active.

Webhook Setup (**Critical Step**)

The webhook allows the WOCS system to track PRs automatically and update the leaderboard in real time.

If it's not connected, contributors won't receive any points, even if their PRs are merged.

How to Add a Webhook?

1. Go to your GitHub repository → click Settings.
2. Scroll to Code and automation → select Webhooks.
3. Click Add webhook.

Then fill in the form exactly as shown below (see reference images attached in the doc):

Payload URL:

<https://web-production-8394b.up.railway.app/webhook/4> (This URL is only for Project Admins, do not share it with anyone else.

Content type:

`application/json`

Secret: (Leave blank)

Webhooks / Manage webhook

Settings

Recent Deliveries

We'll send a POST request to the URL below with details of any subscribed events. You can also specify which data format you'd like to receive (JSON, x-www-form-urlencoded, etc). More information can be found in [our developer documentation](#).

Payload URL *

https://web-production-8394b.up.railway.app/webhook/4

Content type *

application/json

Secret

SSL verification

By default, we verify SSL certificates when delivering payloads.

☒ Enable SSL verification ☐ Disable (not recommended)

Which events would you like to trigger this webhook?

☐ Just the push event.

☐ Send me everything.

☒ Let me select individual events.

SSL verification:

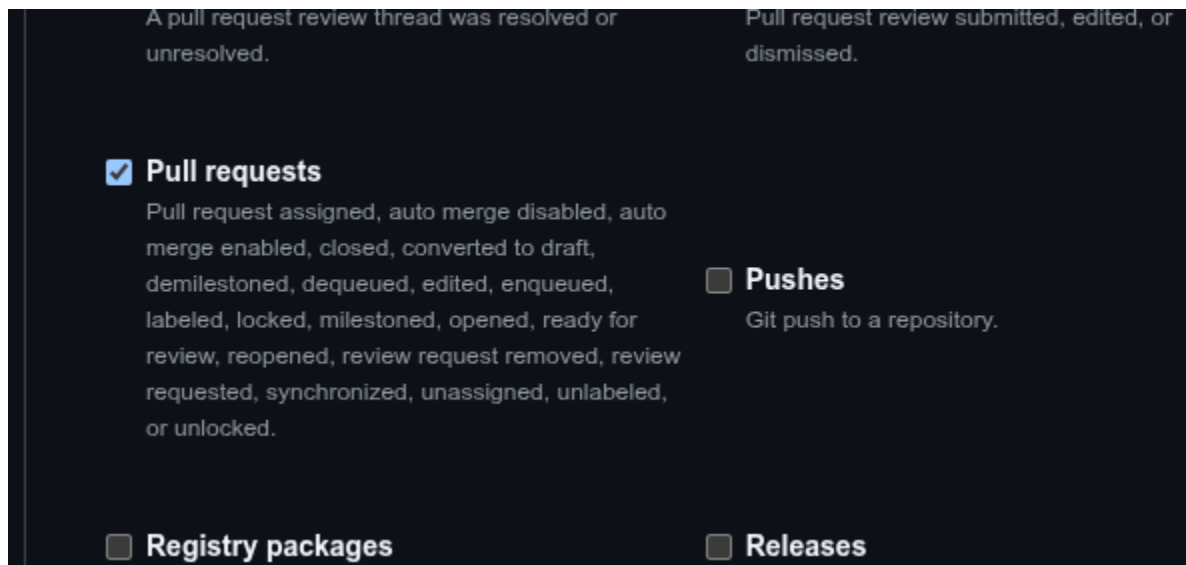

Keep **Enable SSL verification** checked.

Events to trigger:

Select "**Let me select individual events**", then check these options:

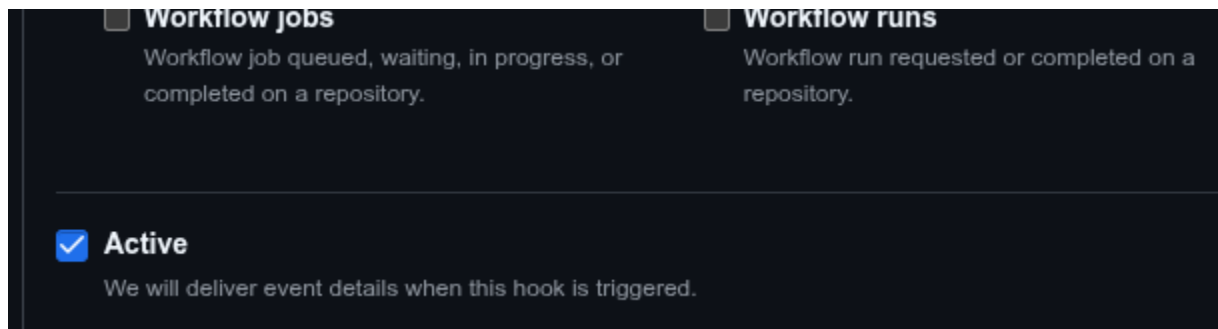

- ☒ Pull requests

Do not checkmark anything else.

Finally, scroll down and make sure **Active** is checked.

Then click **Add webhook**.

You should see something similar to the screenshots above.

Test the Webhook

After adding it, go to **Recent Deliveries** and click **Redeliver**.

If you see a **200 OK** response, the webhook is successfully connected.

If you have done this step, reply “Winter is here!” to the email you got from Code Social. This is to ensure that the Project Admins are actually going through the doc and adding the webhook. Contributors' efforts shouldn't be wasted. If you don't reply to the email, your project will not be featured on the website.

Labeling Guidelines (Important)

To ensure your PRs are tracked correctly and contributors receive the right points:

Make sure you're using the **Correct Label Format**:

- `wocs`
- `level 1 / level 2 / level 3`

Incorrect Examples:

- `WOCS`, `Wocs`, `LEVEL 1`, `Level1`, `level1`, `Level 1` (double spaces)

NOTE: Labels must be added **before merging** the PR. If you merge first without correct labels, points will not be awarded or counted properly.

Evaluation and Level Assignment

- The level of each PR (1, 2, or 3) is **assigned at the discretion of mentors or admins**.
- Once merged, the level is **final and cannot be changed**.
- Mentors' and admins' decisions are **binding and conclusive** to ensure fairness.

Points System & Leaderboard

PR points determine contributor rankings:

- **Level 1:** 2 points
- **Level 2:** 5 points
- **Level 3:** 11 points

Leaderboard link: <https://woc.codesocial.tech/leaderboard>

(will be available once the event begins)

Remember:

- Only **merged PRs with correct labels** and an **active webhook** will count toward points.
- Encourage contributors to register through the official website:
👉 woc.codesocial.tech

Summary

- Repository is public and well-documented
- Issues clearly labeled and active
- Webhook connected and tested
- Kick-Off attended or recording watched
- Discord joined and responsive
- Proper labeling before merges

Support

If you face any issues with anything, you can use any of these options to reach out to us:

- Post your query in the **#help** Discord channel
- Tag **@Team | Arushi** or **@Team | Rizwan on Discord** for help
- [Send us an email](#)
